

Not all the css code seems to be working for me within the styles option and also if I try put it in to my childs css stylesheet.

But within the text field if I set it to Read Only and hide the label position it works.

The only thing I cannot get to work is the i.fa.fa-arrows. It does display on the top of the bar when the Label Position is set to default. But I need to hide the label.

Can you advise how I can get the symbol to appear within the field, like in your demo?

1.	1	Keeping up with changes to legislation and regulations	+
2.		Getting people in your company to wear the correct personal protective equipment	
3.		Getting sound advice on the correct protective equipment for your workplace	

Field 1 if Label position is set to default the symbol shows as above.

* 1

Keeping up with changes to legislation and regulations
